Reeve Young Consulting Limited is an established and well-regarded provider of training courses to the international oil and gas industry.

- Training packages fully customised to clients' requirements and suitable for non-technical delegates and those new to the industry.
- Online face-to-face or self-paced training available for all courses. Blended learning options combining all these methods are also available.
- Varied learning utilising exercises, case studies, quizzes, videos, and games.

Introduction to the Oil and Gas Industry:

An introductory course designed primarily for students from non-technical backgrounds who are new to the oil and gas industry. It is also suitable for specialists who want to expand their knowledge of the wider industry. The course provides an overview and introduction to technical and commercial aspects of both the oil and gas value chains.

2-3 days
teaching time

Economics of the Oil and Gas Industry:

An introduction to the economics of oil and gas. This course is suitable for students with limited experience to the commercial and economic areas of the oil and gas industry and who are new to concepts such as NPV and IRR. The course also covers subjects such as Production Sharing Agreements, oil and gas pricing, refining economics and the valuation of oil and gas assets.

2 days
teaching time

Refining—Processes and Economics

A course focusing on the process of refining crude oil into marketable products. The course looks at the physical and chemical processes utilised in modern refineries and the economics of refining. It is suitable for students from a non-technical background.

1-2 days
teaching time

Introduction to LNG

A course providing an introduction to the LNG chain. Suitable for students who are new to the LNG sector and/or those with a non-technical background. Covers the LNG value chain, recent developments in the industry, markets for LNG and the economics and business of LNG.

1-2 days
teaching time

Developing Natural Gas Resources:

A varied course that provides a detailed look at the options for developing natural gas fields. The course looks at a wide variety of options for utilising gas, both in domestic and export markets. It is suitable for those who are new to the oil and gas industry or those who have limited experience in one sector and are looking to expand their knowledge.

2-3 days
teaching time
